

## Active Matrimonial Update (1.4 to 1.5)

***This update will be workable if the installed version is '1.4'***

1. Log in to your cPanel. Open File Manager.
2. Open the folder where your running script is located.
3. Upload the application.zip file from **updates/1.4 to 1.5/application.zip** which is downloaded from CodeCanyon to your server where your script is running.
4. Extract the zip file in the root directory of the running script. (Example: if your script is located in the public\_html/matrimonial in the server. Then, public\_html/ matrimonial is the root directory.)
5. Go to PhpMyAdmin and open the database of your running script.
6. Import the **.sql** file which is provided in the **updates/1.4 to 1.5/** folder
